WASHINGTON GROWN

BULB GROWING in America is a recent industry. "Washington Grown" Daffodils and Tulips are now conceded to be the finest produced anywhere in the world. This fact is now recognized by leading greenhouse operators and seedsmen.

Some of Europe's leading bulb growers who have visited Northwest bulb fields have commented on the quality of the stocks produced and have pronounced them superior to any produced abroad. Many of the largest plantings are owned by Holland firms who have moved their stock here from Holland.

The excellency of these bulbs is due to a great many factors. Foremost among these is the most perfect climatic conditions for the growing and curing of hardy bulb stocks. The mild wet winters make for perfect growing conditions. The cool summers and proper atmospheric conditions are ideal for the proper curing of the bulbs.

Northwest grown bulbs, when forced, flower much earlier than the foreign product or those produced in less favorable sections. Flowers from these forced bulbs command a premium on the market, due to their earliness, size of flower and superior quality.

The abundance of rich river bottom lands in the Northwest, allows the grower to move his planting to "new" ground often. This is very beneficial to the stocks and insures the production of bulbs free from fungus diseases and other ailments traced to the repeated growing of bulbous stocks on the same soil.

This being America's foremost bulb producing section, the State and Government both maintain a highly trained force of experienced men, who are working constantly on methods of combating disease. The many laboratories and experiment stations are ever on the alert for any new ailment that might attack or impair the quality of the crop.

The educational and scientific work done by the State and Federal departments of agriculture is far ahead of anything accomplished abroad. This is strongly emphasized in comparing foreign and Washington Grown Daffodils. We must destroy a large percentage of new importations in order to have disease free stock for further propagation.

Northwest grown Daffodils lead the world in freedom from disease. This fact has been established many times at Quarantine hearings held in Washington, D. C., by the U. S. Dept. of Agriculture.

GUARANTEE—All bulbs are guaranteed true to name, free from disease or pests, and to arrive in good condition. If they do not give complete satisfaction, advise me at once, and your money will be refunded upon return of the bulbs at my expense.

PREPAID—All prices quoted include delivery by prepaid parcel post or express.

SHIPMENTS are made starting late August or September 1st, continuing until December 1st in normal years. However, for the last several years due to the extreme shortage of bulbs now existing in this country everything is sold out quite early in the fall. For this reason, we urge you to order early so as not to be disappointed. Orders are filled in rotation as received, the earliest orders received are first to be filled.

SUBSTITUTIONS—We grow a great many varieties of daffodils that our stocks are now too small to catalog, due to wartime buying. Should we be out of varieties ordered, some of these may be used for substituting unless an X is marked in the space provided on the order blank.

TERMS OF PAYMENT—Remittances may be made with check or money order. Stamps accepted in payment of small orders. C.O.D. orders must be discontinued for the duration as they take additional time for us as well as postal and express employees and also add an unnecessary expense to the cost of your bulbs. Remitting in full at the time your order is placed greatly simplifies the keeping of our records.

KINDLY OMIT ORDERS FOR LESS THAN \$2.00

QUANTITY PRICES, PREPAID—All bulbs listed herein may be purchased by the 100 for seven times the dozen rate, unless a rate per 100 is quoted.

25 bulbs of a variety at the 100 rate. 6 bulbs of a variety at the dozen rate.

BULBS THAT ARE NOT PRICED IN QUANTITIES OF LESS THAN ONE DOZEN ARE NOT SOLD IN LOTS OF LESS THAN SIX. SIX AT THE DOZEN RATE.

NOVELTY DAFFODILS

Orders for Novelty Daffodils, priced at 75c each or more, should be in my hands before October 1st. When ordering these newer Daffodils at a later date, it would be well to name a substitute, in case your order could not be filled completely.

Order early and plant early for fine flowers. September planted Daffodils produce much finer flowers than later plantings.

NARCISSUS – DAFFODILS – JONQUILS

The terms "Narcissus" and "Daffodils" are interchangeable; there exists a tendency to apply the name "Daffodil" to the varieties in which the trumpet or crown is as large or larger than the petals (perianth); while the name "Narcissus" is usually used for the varieties having small cups or crowns. Jonquils are also a type of Narcissus; they usually bear their flowers in clusters and have rush-like foliage. Many of the Jonquil Hybrids have only the single flower and ordinary foliage. The name "Narcissus" is correct for any or all of the different types.

A FEW SUGGESTIONS FOR GROWING DAFFODILS

They will thrive in any well drained garden soil. Prepare the soil deeply, 12 inches or more is best. Plant at least 6 inches deep, extra large bulbs are better planted 7 or 8 inches deep. (Some varieties make larger bulbs than others.) No manure should come in contact with the bulb. If the soil needs fertility, use bone meal at the rate of one-fifth pound to the square yard. This should be thoroughly mixed with the soil under the bulb.

A mulch of straw or leaves will be beneficial in very severe climates. If the mulch is applied after the first freeze, it will prevent thawing and heaving.

DIGGING—Daffodils are best dug and separated every two or three years in the garden; when used for naturalizing in grass or wooded places they may be left undisturbed for years. Bulbs should be dug when the foliage turns yellow and lays flat on the ground, it need not be completely dry. After digging they may be planted at once or spread out to dry in a cool ventilated place and planted anytime until fall. Never dig in the fall, to do so may cause them to skip one year's bloom, should they bloom flowers will be few and small.

INDOOR CULTURE

Pot the bulbs as soon as received in a good loam soil. Some sand and peat moss mixed with the soil will be beneficial, also a small amount of bone flour; about two pounds to a bushel of soil. Bulbs should be potted shallow, tops of bulbs being about level with the top of pot.

Old pots should be washed thoroughly new ones should be soaked. Place a few pieces of charcoal or fragments of broken pots over drainage hole. A little ground peat in the bottom regulates drainage and retains moisture.

Bury the pots outside under six inches of soil or ashes, water well. In 10 to 12 weeks move to the cellar, or any cool dark place for about two weeks. For a succession of bloom bring pots in at weekly intervals, bringing in the earlier varieties first.

Tops should now be several inches above the soil and buds showing. Pots may now be brought inside to a temperature of 50 to 60 degrees. Later when the flower buds are well advanced the temperature may be increased to not over 65. To put where the heat is greater may cause the buds to come "blind". A little liquid manure once a week will hasten the blooming, and improve the quality.

TULIP CULTURE

Best results are to be had by using soil that Tulips have not been grown in for at least two years. Growing more than two years in the same soil will eventually lead to failure. Do not use manure, if the soil needs fertility, mix bone meal with it at the rate of about three handfuls to the square yard. Plant 5 inches deep and at least 6 inches apart. In very severe climates a mulch of peat moss or leaves will be beneficial. This should be applied after the first freeze, and should not be over one inch deep.

Tulips should be dug and reset each year. Dig when the foliage starts to yellow. it need not be completely dry. Store in a cool, dark place, in shallow trays, until fall.

INDOOR CULTURE—Follow directions for Daffodils, making sure that the flower bud can be felt in the green tips before bringing the pots into a temperature of about 60 degrees. If in doubt, wait a little longer.

BETTER BULBS CANNOT BE PURCHASED AT ANY PRICE

Dear Friends and Customers:

In these trying times we are doing our best to carry on and serve our customers to the best of our ability. We have very little experienced help and the demand for our fine Daffodils far exceeds the supply. Some varieties have been sold so heavy in the past few years that the stocks are now too small to catalog. We look forward to the time soon when we can secure additional stocks from Europe for further propagating, so as to increase our selection for our many Daffodil enthusiasts.

PAPER BAG SHORTAGE

The manufacturers of paper bags have discontinued making many of the small sizes. Due to our inability to secure the needed amount of these small bags, we have been forced to withdraw prices for a single bulb in varieties priced at less than \$2.50 per dozen.

To you customers wishing one each of a less expensive variety, we suggest you pool your order with friends.

AUTUMN BLOOMING COLCHICUMS

Colchicums are charming and interesting plants, hardy, persistent and of easy culture. These great crocus-like flowers carpet the ground in September and October without foliage, the foliage appearing early in the spring, usually lasting until July.

In very warm climates partial shade is preferable, otherwise they succeed best in an open sunny border.

The blossoms seem fragile but are quite tough and last exceedingly well when cut for the house. In the garden the individual flowers last about three days, depending on the weather, being able to stand light frosty mornings better than hot sunny days. Five to 16 blooms come in succession from single bulbs, giving a long flowering period.

In congenial surroundings Colchicums will increase so that every few years re-planting is desirable. They should be lifted when the foliage dies down, separated and replanted.

Plant Colchicums as soon as the bulbs can be obtained and are received. Planted in August or September, the bulbs will bloom almost immediately, but are at their best when well established. Deep, well enriched, good loamy soil is preferred with tip of the long bulb placed 1 to 2 inches under the surface. If no ground cover is planted give a light mulch over winter.

The bulbs and foliage are distasteful to animals; mice, moles and rabbits do not bother them.

FLOWERING WITHOUT SOIL or WATER

A most interesting feat of Colchicums is their ability to flower from dry bulbs without soil or water. This makes them valuable novelty gifts for friends and most fascinating for shut-ins to watch develop.

The flat based, clean bulbs may be set on a table, on the window sill or in a container where they will start flowering. As the blooms fade and drop, cut them off and others will follow in quick succession.

In the dark the flowers and tubes come an attractive pure white. On the window sill with plenty of light they have their normal color—less color appearing the farther the bulbs are from the light. The skins of the bulbs are dry and tough which often must be broken to allow the buds to appear.

After flowering in the house, the bulbs should be planted in the garden at once. Bulbs planted outdoors late in the fall do not have as good a chance to recover as those planted out early.

Colchicums are ideal as hospital gifts, after flowering the bulbs may be taken home and planted.

LEUCOJUM (Snowflakes)

IXIOLIRION

SIBERIAN BLUEBELL. (Ixiolirion Pallasii). An elegant and very showy hardy bulbous plant, bearing umbels of beautiful deep blue or violet, tubular, six-lobed flowers in May and June. It thrives in any good deep light soil and a fairly open sunny situation. Height 10" to 12". Very showy in borders and prized for cutting, the flowers lasting unusually long. It is beneficial to the bulbs to remove the florets after the flowers have withered. Plant 5 inches deep. Supply very limited. (Only 12 to a customer.) Doz. \$2.00.

LEUCOJUM (Snowflakes)

Leucojums are too little known in most areas. They thrive anywhere, increase rapidly and prefer to be left undisturbed for years. The second year will give much finer flowers and in great profusion. They flower between daffodils and tulips, when flowers are very scarce in the garden. They are highly desirable for bouquet work, especially with other flowers.

AESTIVUM (Summer Snowflake). A very hardy, handsome, robust growing plant, producing spikes of elegant drooping white flowers, tipped with green. Stems 14 to 18 inches, greatly prized for cutting. Plant 5 inches deep. Doz. \$1.00; 100, \$7.00.

ORNITHOGALUM ARABICUM

ORNITHOGALUMS

ARABICUM. (Arabian Lily). Clusters of large, pure white blossoms with shiny black centers; a splendid cut flower with a good stem, fragrant and long keeping. For outdoor planting in mild climates only. Beautiful for forcing in northern climates. Plant about 5 inches deep. Doz. \$1.25; 100, \$8.75.

NUTANS. (Silver Stars). Hardy variety for shade or open exposure. Silver grey flowers shaded green. Most unusual and attractive. Splendid for cutting. Plant about 4 inches deep. Doz. \$1.10; 100, \$7.75.

UMBELLATUM. (Star of Bethlehem). Hardy dwarf species, numerous little white star-shaped flowers on branching stems. Fine for growing wild in the woods as it needs no care. Often found in old gardens where it has been growing for many years. Height four inches. Plant about 4 inches deep. Doz. 75c; 100, \$5.25.

ORNITHOGALUM (Nutans)

ANEMONES DE CAEN

ANEMONES

Culture same as for Ranunculus; be sure to plant pointed end down.

*Where There Is Danger of Freezing,
ANEMONES AND RANUNCULUS
Must Be Planted in Very Late Winter or
Early Spring.*

*Sunny Location Is Best. Soak 2 or 3 Hours
in Water Before Planting.*

TOP SIZE BULBS

MONARCH DE CAEN. A magnificent and robust strain of poppy anemone. Huge saucer shaped flowers in brilliant shades of pink, red and blue. Doz. 75c; 100, \$5.25.

SEMI-DOUBLE TYPES

ST. BRIGID. Finest strain of semi-double anemones in existence. Brilliant shades of red, pink and blue. Doz. 75c; 100, \$5.25.

RANUNCULUS

Half hardy in northern climates, should be planted as early as possible in spring. May be started in a cool place, in pots, later to be set out when danger of freezing is over. Early February planting is recommended in climates where there is some light freezes. Where there is no danger of freezing, planting is best done in late fall. Plant 2 inches deep, about 4 inches apart, being sure to plant the bulbs with the "claws" downward. Moisture should not fail during the growing season.

IMPROVED GIANT FRENCH. A superior strain grown by one of California's most successful growers of this most popular flower. The large double flowers are car-

ried on tall graceful stems, they are unexcelled for cut flowers. Few flowers, so easy to grow, will give such a profusion of bloom for such a small investment, each bulb producing about a dozen flowers over a long period.

TOP SIZE BULBS

Not to be confused with 2nd and 3rd size bulbs so often offered at bargain prices.

MIXED. Every conceivable shade of yellow, pink, orange and scarlet to the deepest red. Doz. 75c; 100, \$5.25.
